NEOGEN™

NITROGEN PLASMA TECHNOLOGY

What does it do?

It resurfaces the full surface of the skin treating common concerns such as:

- uneven pigmentation and age spots
- fine lines
- deep wrinkles
- acne scars
- sun & age spots
- loose eyelid skin (upper and lower)

How does it work?

NeoGen PSR uses plasma energy to treat skin. A device delivers energy pulses to heat the skin's surface. The treatment preserves the skin's outer layer, which acts as a natural protective dressing until new skin forms in 7-10 days. Surface improvements appear quickly, and deep dermal collagen remodeling continues for months to years. The treatment takes an hour, and the results are long-lasting, although natural aging will continue.

Is this treatment right for me?

Take a moment to review the before and after photos in our gallery which show patient results after just one treatment. Pay particular attention to the upper and lower eyelid tightening, the clarity of the skin pigmentation, and the improvement in the overall appearance of the patients. Please feel free to schedule a complimentary consultation to see if the NeoGen PSR treatment is right for you.

What makes NeoGen Plasma different from other available treatments?

The ground-breaking science behind NeoGen Plasma makes it different from other treatments in several important ways. NeoGen Plasma is the first and only treatment clinically proven to regenerate skin. 100% of the skin is treated, initiating regeneration deep below the surface, remodeling a natural skin architecture that replaces the damaged, wrinkled layers

How long does treatment take?

NeoGen skin regeneration can be used to treat the entire face in around 40 minutes, or a smaller selected region in 5-10 minutes. This simple procedure is performed here in our clinic. Depending on the treatment area, the condition of your skin, and your desired outcome, one to six treatments may be recommended. Recovery time is related to the strength of the treatment performed. Following your treatment you will see improvements which will become even more dramatic over time.

What kind of improvements can I expect to see?

Following low-energy treatments, you will see improvements in skin texture and tone and a reduction of fine wrinkles. Following high-energy treatments, you will also see these improvements as well as the reduction of deep wrinkles, acne scars, and pigmentation marks.

New, healthier, natural elastin growth will improve contours, tighten your skin, and enhance your overall appearance. Clinical studies show a continued improvement for as long as two years after treatment.

Ideal for the full face, neck, chest and hands or regional areas such as around the eyes and mouth.
